

How to embed an ornamental bead

If you forecast to insert your beads within your motifs, embed them first individually : they will be ready to begin your motifs.

You may also forecast to use the embedded beads to join the motifs between themselves.

Fold over the two motifs woven in RAW against the round bead and link them with a 3rd RAW motif into the blue seed bead already on the spot. Do the same thing on the other side of the bead. Link in the same way. Tight well the links. According to the size of your ornamental bead, you will have to adapt the number of RAW motifs to weave on each side.

Insert a seed bead between each bead of the RAW motif, above and below. Pass your thread again into the two rows thus obtained, so that the beads get well stabilized. You will also pass your thread several times inside the bead to better stabilize the set, then stop your thread circulating into the seed bead of the set.
